this book argues that post keynesian theories of endogenous money can be combined with marxian analysis in order to give insight into the changing power relations between the state finance sector and real economy since ww2 a key theme is that financial power derived from the control of money issue and its purchasing power is determined by the state and market in varying proportions depending on context but that state sovereignty has been lost in recent decades in addition the growth of financial markets in recent decades so called financialization has led many to assume that private finance is an important proximate driver of economic affairs in general in contrast the book argues that this provides insufficient explanation of events to discuss financial factors as causes of financial crisis risks describing the phenomena without illustrating the root causes instead the book argues that systemic drivers of capitalism rooted in production probably best understood by marx actually do provide a more plausible explanation of the causes of the financialization and erosion of state sovereignty in addition the post keynesian descriptions of monetary processes are considered to best reflect the actual reality of the monetary system this represents an interesting synthesis of the classical marx with modern money theory the interpretation of marx used to explain this financial transformation has been named the temporal single system interpretation which illustrates marx s value theory across periods and identifies a tendency towards falling profit rates it is claimed that falling profits in turn are an underlying driver of the systemic propensity towards financialisation crisis and stagnation the empirical findings presented taken from case studies of the uk and germany appear to support this view the central argument is that the response of agents including the state to the profit tendency has been a significant driver of the observed financial transformation the book then concludes that this synthesis provides a more appropriate explanation of the historical transformation of the financial system since the great depression than much of the financialization literature and illustrates the source and operation of financial power in the modern capitalist state and market
